Introduction

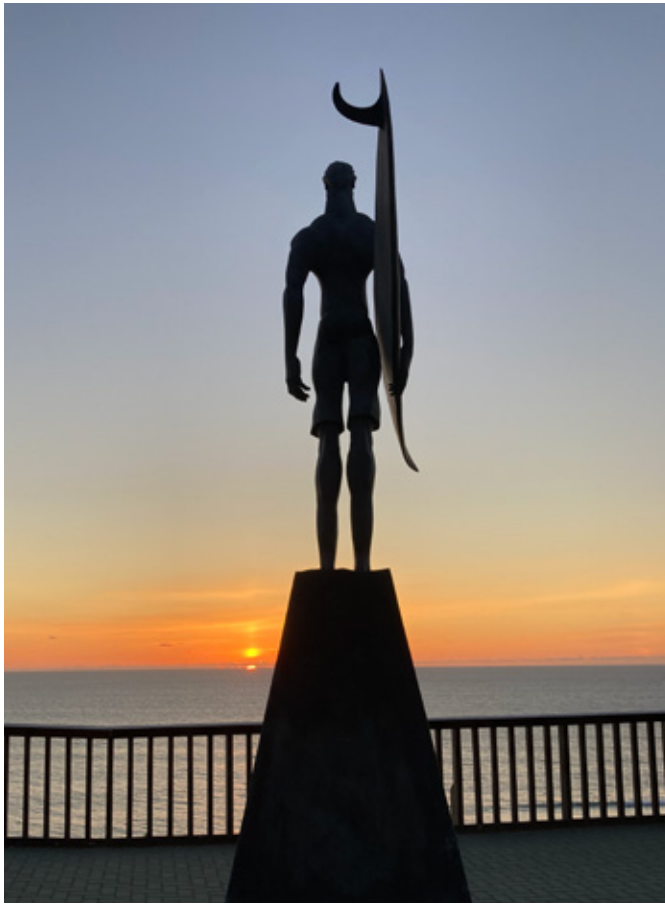
On October 14th, 2011, Ericeira was recognised as a World Surfing Reserve by the non-governmental organization Save the Waves Coalition. The reserve area extends over 4 kms of Mafra's Municipality coast, crossing the parishes of Ericeira, Santo Isidoro and Encarnação. It was the 2nd Reserve to be selected in the World and the 1st in Europe.

The World Surfing Reserves aim to develop a model of preservation of waves and coastal territories that protects the main environmental, cultural and economic attributes of communities where surfing occupies a particular role. World Surfing Reserves are implemented, managed and protected by local communities, fostering institutional participation and cooperation.

In order to celebrate the 10th anniversary of the Ericeira World Surfing Reserve, and also to strengthen the relationship between surfing and sustainability, Ericeira Surf Clube created the "EriceiraWSR+10" project, financed by the European Commission under the Erasmus+ Sport programme and with Mafra City Council's backup and support.

The goals of "EriceiraWSR+10" are (1) to understand the impact of the surfing practice in Ericeira, (2) to raise awareness of the creation of sustainable sports communities, and (3) to develop a surfing community based on sustainable practices.

It is within the scope of the first goal that the development of this "Impact Study of the 10 years of the World Surfing Reserve in Ericeira" comes to light, in order to analyze the different impacts generated in the territory by the allocation of the Reserve and the phenomenon of surfing. Throughout this document it is possible to observe the results obtained in the four dimensions of analysis considered, namely: social, economic, environmental and Ericeira's image.



Co-funded by the Erasmus+ Program of the European Union

Goal

The goal of this study is to observe the impact of the surfing practice and associated activities in Ericeira taking into account the award in 2011 of the World Surfing Reserve award.

It was intended, therefore, to analyze the generated and consequent dynamics of the surfing practice in the territory, namely in its economic, social and environmental dimensions, as well as in the image and in the very identity of Ericeira.

Co-funded by the Erasmus+ Program of the European Union

Methodology

For the development of the present case study, a mixed research methodology was used, combining quantitative methods (i.e. application of surveys, review and identification of public and/or published data) and qualitative methods (i.e. semi-structured interviews and analysis of bibliographic content).

The approach to the object of analysis and the definition of the limits of the investigation were defined through the identification, a priori, of the potential benefits and costs in four dimensions of analysis:

. **SOCIAL IMPACT** through a focus on demographic change, social capital transformation or community dynamics :
- Inclusion
- Accessibility
- Gender equality
- Sports practice
- Education and Training
- Local safety and quality of life
- Gentrification/"touristification

. **ENVIRONMENTAL IMPACT** through a focus on surfing and its associated activities (production elements and practice):
- Waste generation
- Water quality
- Coastal shore quality
- Material consumption
- Air contamination
- Energy comsumption
- Marine Biodiversity
- Seabed Damages
- Territory, soil planning

. **ECONOMIC IMPACT** through a focus on the manufacture of products or the generation of services, mainly those related to tourism, as well as changes in the local economic structure and in the territory of influence:
- Work and production structure
- Tourism and other surfing related services
- Surfing industry
- Small local based Businesses related
- Real estate sector
- Innovation and digital transformation

. **IMPACT ON** Ericeira's IMAGE and its own identity:
- Assessment of the image perceived by tourists
- Residents perception of local identity
- Presence on social networks
- Presence in generalized and specialized media

Co-funded by the Erasmus+ Program of the European Union

These dimensions, and above all their indicators, were adopted taking into consideration the local reality of Ericeira and a first approach to the available data within the scope of the study.

In this context, it is important to emphasize the insufficiency of existing data with specific reference to Ericeira and to the coastal parishes of Mafra municipality, since most of the available data refer to the municipality of Mafra as a whole.

Given the size of the municipality, with 11 parishes with very different characteristics, the data regarding Mafra does not reflect the impact on Ericeira and, to a certain extent, misrepresents the impact results.

Even so, from the existing data, we sought to identify and provide as faithful a portrait as possible of how the territory has evolved since Ericeira became a World Surfing Reserve (WSR) in 2011.

Likewise, it is important to mention that the indicators were also designed with the aim of being considered a reference for future studies, thus allowing the continuity of linear and frequent analysis, which will allow the monitoring, in a rigorous way, of the evolution of the WSR throughout the next few years.

Co-funded by the Erasmus+ Program of the European Union

Among the different data collection instruments used, we highlight the creation of two surveys, one aimed at Ericeira's residents and the other aimed at tourists, surfers and non surfers.

.The goal of the survey addressed to residents was to **know residents' perception of changes that have been felt since the creation of the WSR in Ericeira**, as well as an assessment of the same.

.The goal of the survey addressed to tourists was to know the **degree of significance** given to surfing activities and the role of the WSR of Ericeira in the decision making process of visiting Ericeira, as well as the consumption patterns and satisfaction of these people.

The survey addressed to residents was designed according to the following dimensions of analysis: territorial, economical, touristic, sports and ecological.

The survey addressed to tourists is the result of an adaptation of the 2018 version of the "Encuesta sobre el Desporto Touristic" carried out by the **Instituto Canario de Estatística**, which has been applied in that archipelago, on a quarterly basis, since 2010.

The final version of both surveys was validated by experts, and a total of 10 PhDs researchers were in charge of the analysis.
The surveys application and respective data collection were carried out between the 19th August and the 18th September, 2021, in digital format, resorting to Snowball sampling. The survey addressed to residents was answered by 674 people while the survey addressed to tourists was answered by 117 people.

The surveys and the profile sample obtained are available in annexes 1, 2, 3 and 4 of this document.
Finally, it should be taken into consideration the fact that the surveys were applied in 2021, with all the particularities associated with the COVID-19 pandemic on that period, caution is required when extrapolating (and interpolating) the results of the surveys applied to tourists in relation to other years prior to 2019.

Co-funded by the Erasmus+ Program of the European Union

Social Impact

Based on the bibliographic review of the different sudies on the impact of surfing and of sports tourism in the territory, and on the analysis of the secondary data available, the following potential benefits and social costs were defined:

. POTENTIAL SOCIAL BENEFITS

- SOCIAL MOBILIZATION
- PROMOTION OF THE SPORTS PRACTICE AND OF HEALTHY LIFESTYLES
- SOCIAL INCLUSION THROUGH SPORT
- SPORTS AS A TOOL FOR THE EDUCATION AND SKILLS DEVELOPMENT
- GENERATION OF SOCIAL CAPITAL

. POTENTIAL SOCIAL COSTS

- THE CONTRADICTIONS OF A CULTURAL SHOCK BETWEEN THE TOURIST AND THE RESIDENT/LOCAL
- DISCOMFORT BETWEEN PEOPLE WORKING IN OTHER SECTORS, TRADITIONALLY THE FISHING SECTOR
- GENTRIFICATION

The data obtained and analyzed sought to confirm the existence of these potential impacts through the different indicators presented below.

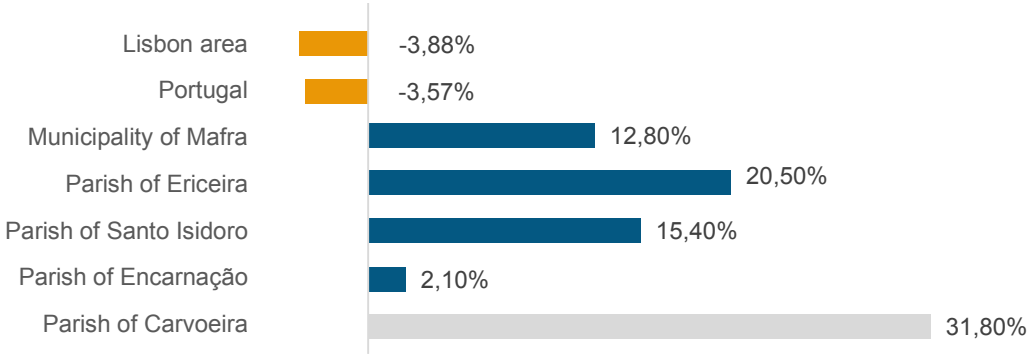
Co-funded by the Erasmus+ Program of the European Union

POPULATION EVOLUTION

There is an increase in the population, not only in Ericeira, but also in other parishes and throughout **Mafra's Municipality**. This growth **contrasts with the decrease of population** in the Lisbon Metropolitan Area and throughout the Portuguese territory.

Population growth is common to other coastal areas of the country. Ericeira is not a unique case. The number of people who have been transferring their permanent residences from the interior areas to coastal municipalities is increasing - which is why it is not clear and conclusive to impute this fact exclusively to the growth of surfing.

	2011	2021	Variation
Parish of Ericeira	10.260	12.368	**20,55%**
Parish of Santo Isidoro	3.814	4.403	**15,44%**
Parish of Encarnação	4.798	4.900	**2,13%**
Parish of Carvoeira	2.155	2.840	**31,79%**
Municipality of Mafra	76.685	86.523	**12,83%**
Portugal	10.542.398	10.165.513	**-3,57%**
Lisbon area	547.733	526.500	**-3,88%**

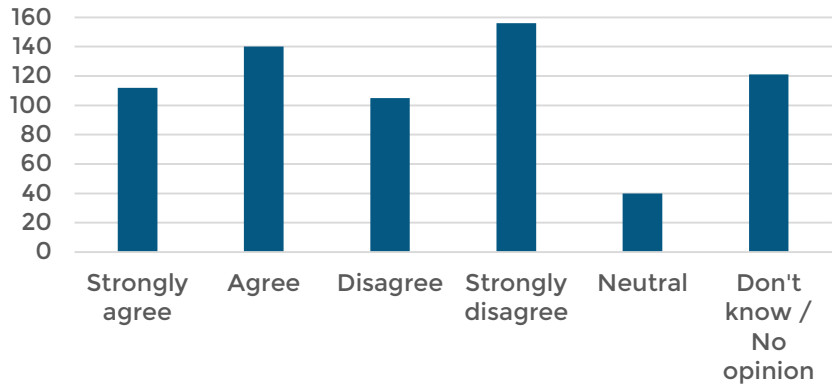


Co-funded by the Erasmus+ Program of the European Union

SURFING AS A FACTOR FOR THE RESIDENCE IN ERICEIRA

The Surfing practice is considered a decisive factor by 37.4% of questionees.
The most repeated factor is "Living close to nature and the sea" by 90.1% of questionees.

The following factors were/are decisive to choose living in Ericeira's area: **[Surfing]**



The following factors were/are decisive to choose living in Ericeira's area: **"Strongly agree" and "Agree"**

AGEING POPULATION

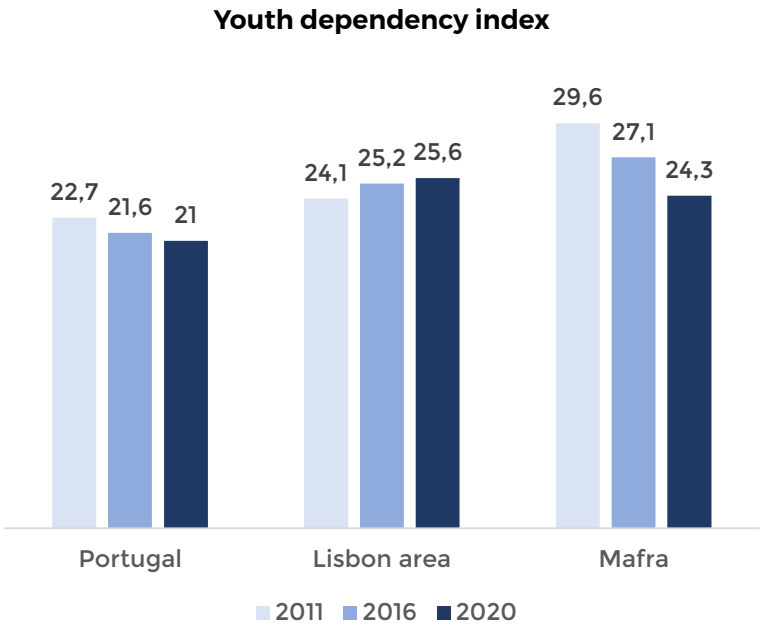
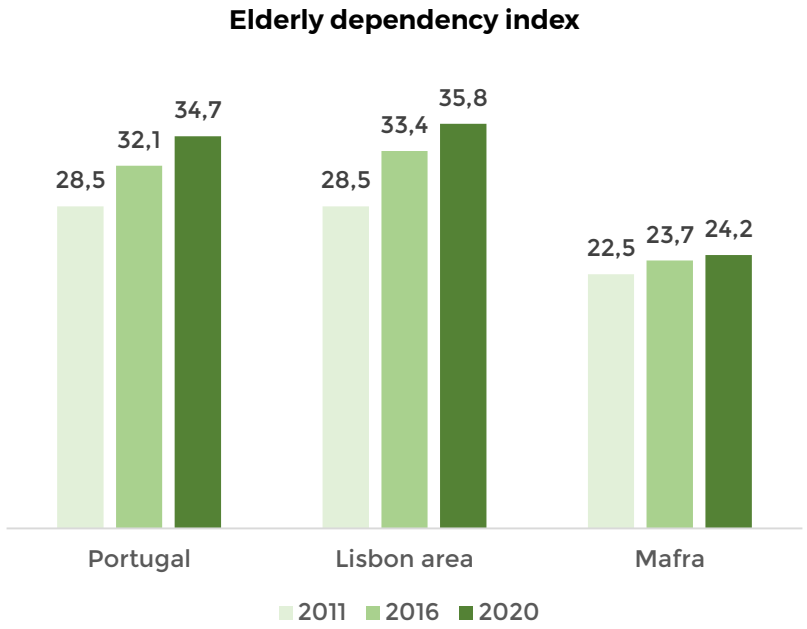
Where are there more and less YOUNG PEOPLE per set of 100 working age people?



Where are there more and less ELDERLY people per set of 100 working age people?

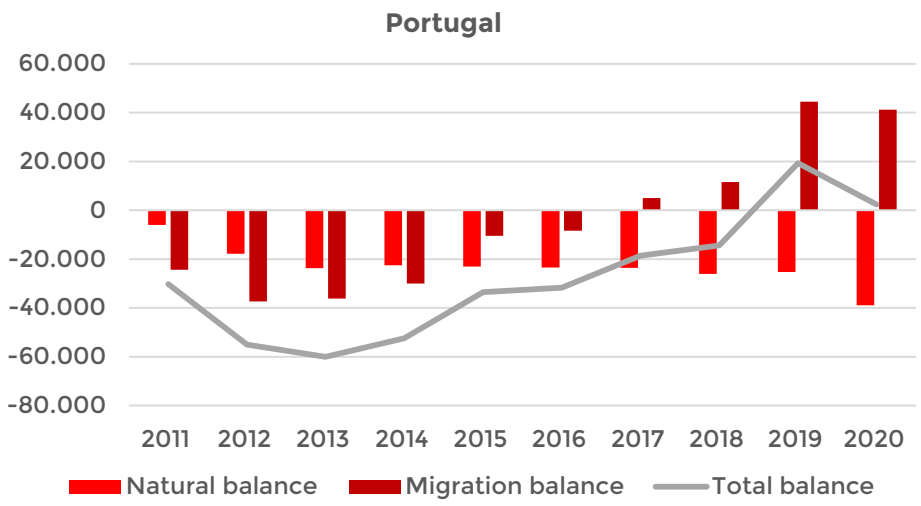


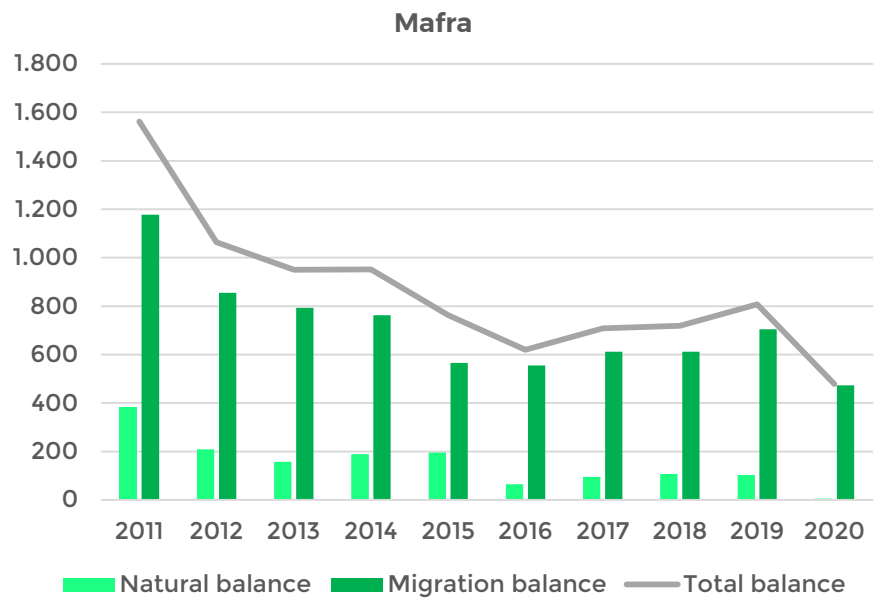
Source: PORDATA - Contemporary Portugal database

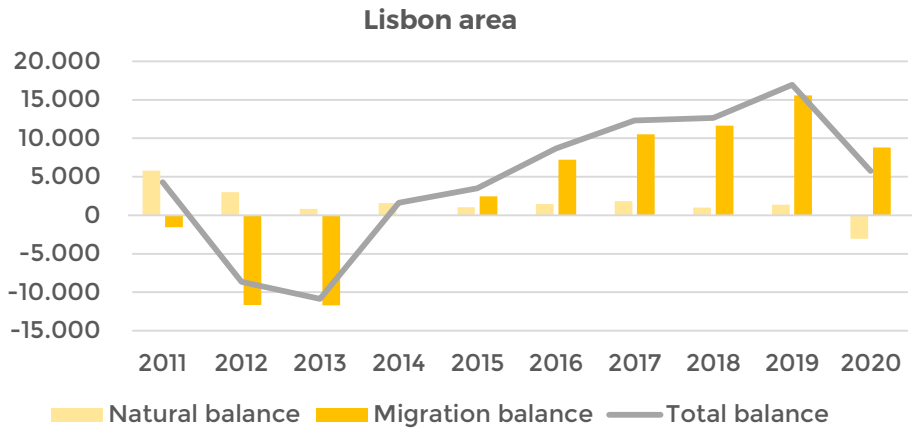
Mafra's population is **significantly** younger than the national average. In the **indexes**, it is possible to observe a double trend: the **decrease** in the **proportion** of **young people** and **the growth of the older population**

Co-funded by the Erasmus+ Program of the European Union

POPULATION'S MIGRATION







Source: PORDATA – Contemporary Portugal database

The analysis of migratory balances shows that Mafra has been an appealing municipality for many individuals over the last decade. However, in the period between 2011 (the year of recognition of Ericeira as WSR) and 2020, the migratory balance was reduced, which means that although Mafra continues to attract population, this appeal is decreasing and is therefore in deceleration.

Co-funded by the Erasmus+ Program of the European Union

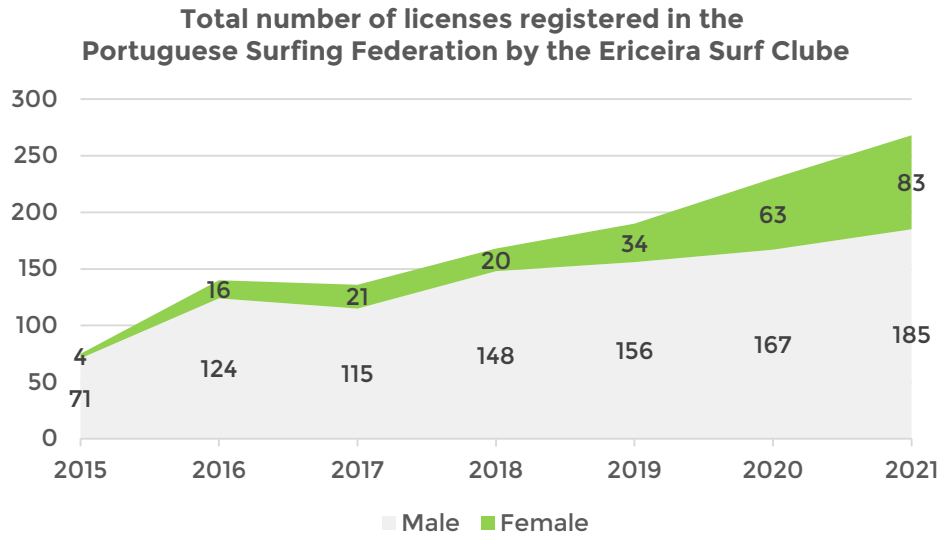
FEDERATED SURFING PRACTICE

Many people are certified by the Portuguese Surfing Federation to perform more than one activity. In this period 2015-2021, the number of certification processes by role/activity was higher than the number of people.

	2015	2016	2017	2018	2019	2020	2021
Male	71	124	115	148	156	167	185
Female	4	16	21	20	34	63	83
TOTAL	**75**	**140**	**136**	**168**	**190**	**230**	**268**

Growth in the number of certification processes per role 2015-2021:

206,7%



The growth of the Surfing practice in Ericeira has been exponential. The data obtained and made available from 2015 onwards shows that, in 7 years, the number of certification processes (regarding surfers, athletes, coaches, judges or directors – and these may be cumulative) grew by **206,7%**.

Source: Ericeira Surf Clube

Co-funded by the Erasmus+ Program of the European Union

FEDERATED SURFING PRACTICE

Many individuals are federated into more than one surfing activity. In this period 2015-2021, the number of federative processes per activity was higher than the number of individuals. It should be noted that the COVID-19 pandemic had no negative effect on the number of individuals registered at Ericeira Surf Clube in 2020 and 2021.

	2015	2016	2017	2018	2019	2020	2021
Surf	82	133	153	205	233	273	321
Bodyboard	15	45	24	33	38	25	38
Bodysurf	0	0	2	3	3	1	1
Kneeboard	0	0	0	0	0	0	0
Longboard	9	8	9	5	6	3	1
Skate	0	1	0	0	0	0	0
Skimboard	0	0	0	0	0	2	0
SUP	0	2	1	2	5	2	2
TOTAL	**106**	**189**	**189**	**248**	**285**	**306**	**363**

Source: Ericeira Surf Clube

Growth in the number of federated individuals by activity 2015-2021:

242,5%

There is a growth in the number of federated individuals per activity of 242,5%. This increase is mainly due to the growing number of processes in the surf activity. In the remaining activities, there is a tendency for a decrease in the number of processes.

Co-funded by the Erasmus+ Program of the European Union

PERCEPTION OF THE LOCAL COMMUNITY REGARDING THE GROWTH OF SURFING

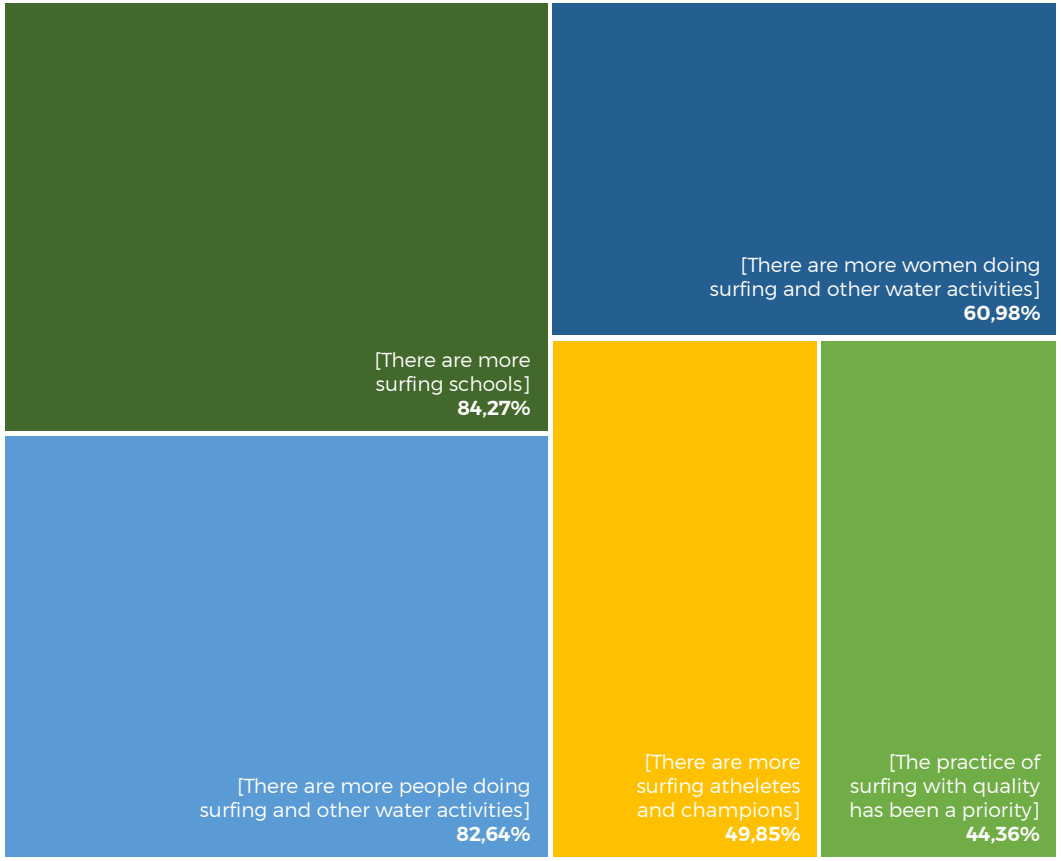
The resident population felt first-hand the growth of surfing and considers that it has grown considerably.

But **although such growth** is evaluated positively in several aspects, this fact also **has a negative impact on the coexistence between the surfing practice and other activities.**

The **growth of surfing in Ericeira is noticeable by most**. However, it is important to point out that:

- Residents consider that the number of surf schools has grown

- Residents consider that this growth has not been accompanied by an improvement in the quality of sports alternatives for all people.



Source: Survey applied to residents in Ericeira (2021)

Co-funded by the Erasmus+ Program of the European Union

EQUALITY

PRESENCE OF WOMEN AND THEIR ROLES AT ERICEIRA SURF CLUBE

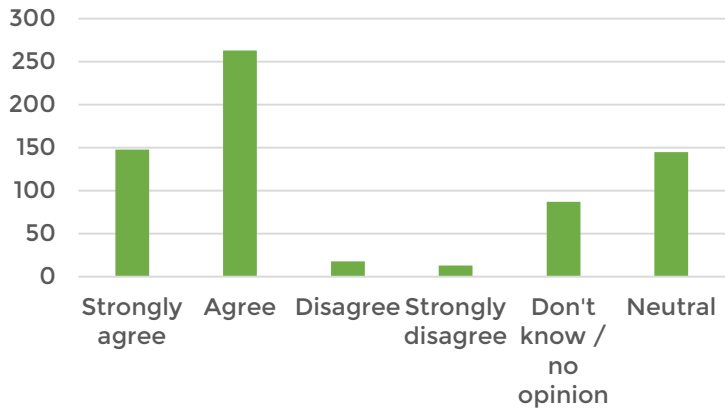
It is observed that the increase in the number of **women occurs in roles more related to the practice itself: surfers/athletes and coaches**. This growth was not reflected in the functions of directors or judges.

	2015	2016	2017	2018	2019	2020	2021
Participants	0	6	14	8	18	0	0
Athletes	4	10	6	12	16	63	83
Coaches	0	1	3	4	7	6	2
Managers	0	0	0	1	0	1	0
Referees	0	0	0	0	0	0	0
TOTAL	**4**	**17**	**23**	**25**	**41**	**70**	**85**

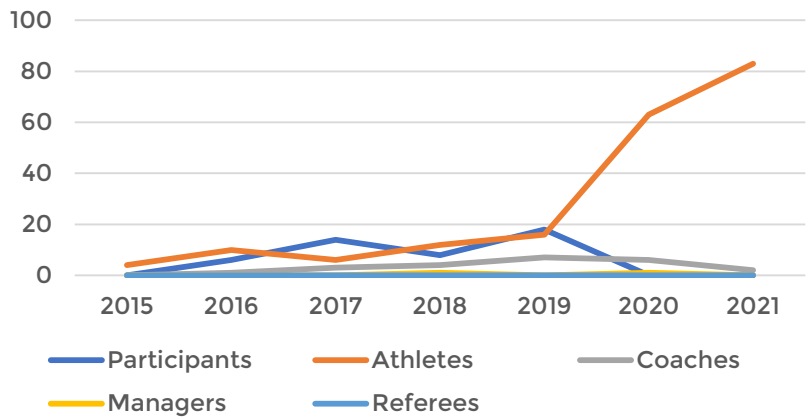
VISIBILITY OF WOMEN SPORTSMEN

The increase in the number of female surfers/athletes makes female sports activity more visible, which creates a more propitious environment for promoting the practice among girls and women.

[There are more women doing surfing and other water activities]



Evolution of the number of women with licenses in different roles

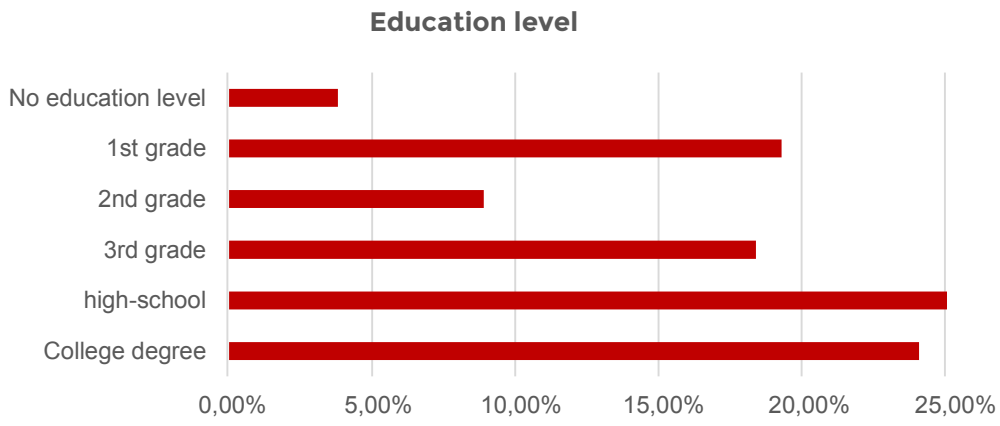


Source: Survey applied to residents in Ericeira (2021)

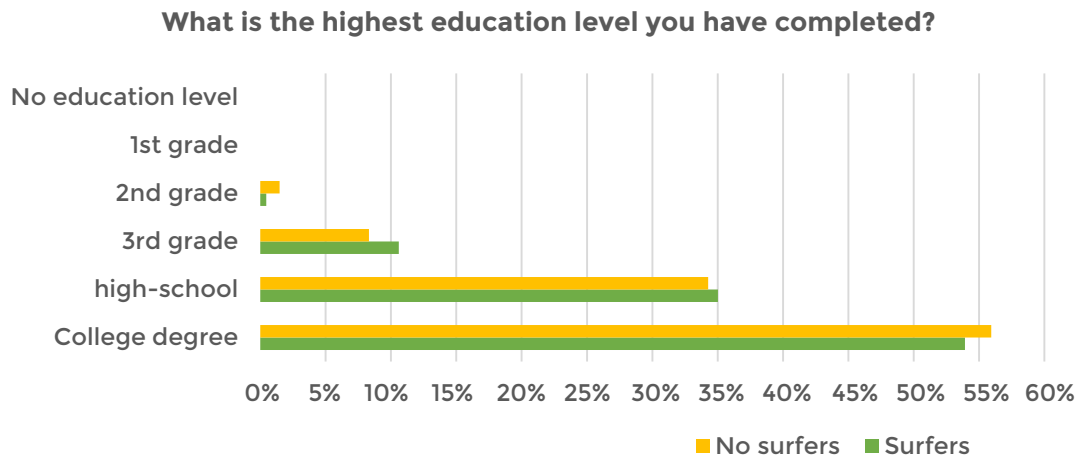
Co-funded by the Erasmus+ Program of the European Union

EDUCATION

Comparing the levels of academic training of the surveyed residents, it appears that **the academic level is significantly higher than the Portuguese average.** There is no difference in the academic degrees between people who practice and do not practice surfing.



Source: PORDATA – Contemporary Portugal database



Source: Survey applied to residents in Ericeira (2021)

Co-funded by the Erasmus+ Program of the European Union

INCLUSION

Since the recognition of the WSR, several initiatives favoring the inclusion of people with different impairments have taken place in Ericeira. This resulted in the transformation of services and equipment offered, to respond to the limitations and special needs of the different segments of the population, with a special focus on those related to the types and degrees of impairment:

Visual impairment: "Signage Project"

Approved in April 2016, this project aimed to replace the existing road signage, which indicate the name of the beach and integration into the RMSE, moving forward to a new image that allows to identify the features of surf spots, associated with an ecological ideal and integrated in the spirit of WSR without neglecting information about the beach in its different usage. The signage was inspired by the snow slopes color system, associated with the difficulty level. The combination of symbols associated with each color is aimed at colorblind people (adapted from Carapinha, 2019)

Adapted surfing: Surfing4Inclusion

A group dedicated to Adapted Surfing was created at Ericeira Surf Club (ESC), including individuals with different impairments from APERCIM and 20 institutions for the rehabilitation of people with impairments at a national level, a project supported by the Portuguese Institute of Sports and Youth, IP, Mafra Municipality, BPI and Fundación La Caixa and identified internationally as good practice by SportandDev.org.
The initiative was also part of the activities commemorating the 10th anniversary of the World Surfing Reserve in Ericeira, having provided to 150 people with different impairments and special needs surf baptisms, the experimentation and learning of the surfing practice in a recreational way and outings in the WSR. It was also given the opportunity to participate in various pedagogical activities about sustainable development, to visit the Tapada and the National Palace of Mafra, **together with the European delegations present in the event.**

Co-funded by the Erasmus+ Program of the European Union

DISAGREEMENTS BETWEEN SURFERS AND BATHERS

Disagreements between surfers and bathers are frequently referred to, although there is no concrete data on the number, way and orientation of possible complaints.

Residents show positive and negative tendencies in the way they evaluate the activity of surfers and, in particular, surf schools on Ericeira's beaches. Most residents believe that the surfing community is not taking a proactive approach to adopt a respectful and protective behavior towards beaches and other bathers.

Another commonly mentioned problem is that of traffic and motorhomes. However, the statistics of complaints related to caravanning does not show a remarkable growth over the last decade.

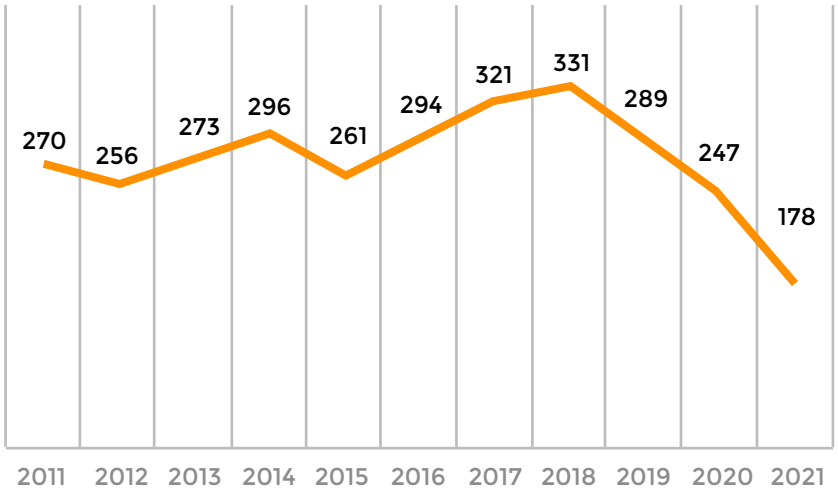
OFFENSES

Number of criminal incidents in general	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021
	270	256	273	296	261	294	321	331	289	247	178

Source: Maritime Delegation of Ericeira, Captaincy of Cascais

Number of occurrences related to motorhomes



The increase in population and tourism can be accompanied by an increase in the number of criminal incidents. In the specific case of Ericeira, this growth tendency was observed until 2018, declining since then.

The restrictions and confinements of the years 2020 and 2021 can largely explain the reduction in the number of criminal incidents, although the decline started as early as 2019.

Co-funded by the Erasmus+ Program of the European Union

Environmental Impact

Based on the literature review of the different studies on the impact of surfing and sports tourism in the territory and on the analysis of the secondary data available, the following potential environmental benefits and costs were defined :

POTENTIAL ENVIRONMENTAL BENEFITS

- RAISING AWARENESS FOR ENVIRONMENTAL ISSUES TO THOSE WHO PRACTICE SURF IN ERICEIRA
- VALUE THE NATURAL AND SOCIO-CULTURAL HERITAGE OF ERICEIRA ENHANCING THE PROTECTION OF NATURAL AREAS
- MAKE CONSERVATION POLICIES COMPATIBLE WITH HUMAN AND SOCI ECONOMIC DEVELOPMENT POLICIES

POTENTIAL ENVIRONMENTAL COSTS

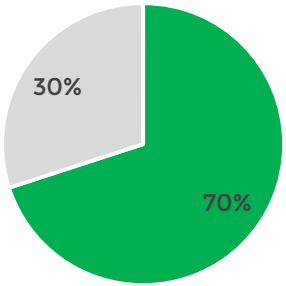
- IMPACT OF SPORTS EVENTS ON ENERGY CONSUMPTION AND WASTE DISPOSAL
- ENVIRONMENTAL IMPACT OF SPORTS FACILITIES FOR TOURIST PURPOSES POSSIBLE NEGATIVE IMPACT OF SURFING ON MARINE ECOSYSTEMS
- EXPONENTIAL INCREASE IN SURFING PRACTICE GENERATES A HIGHER VOLUME OF WASTE
- DIRECT RELATIONSHIP BETWEEN TOURISM AND THE TRANSPORTATION INDUSTRY

The data obtained and analyzed sought to confirm the existence of these potential impacts through the different indicators presented next.

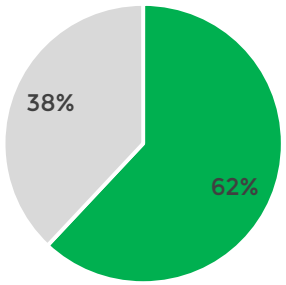
Co-funded by the Erasmus+ Program of the European Union

RESIDENTS' PERCEPTION ABOUT THE ENVIRONMENTAL IMPACT OF THE ERICEIRA WSR

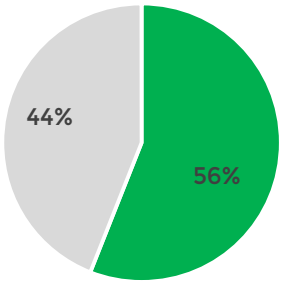
[Ericeira is a great example for all other World Surfing Reserves in the world]



[Beaches are better now]



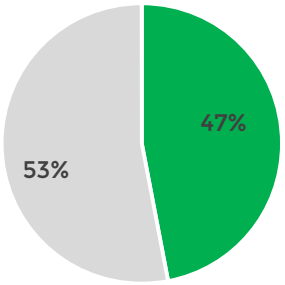
[There is greater ecological awareness]



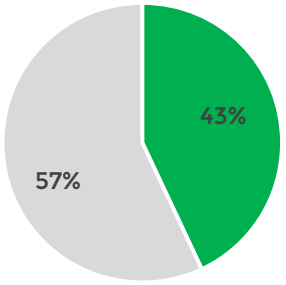
It appears that the evaluation of the protection measures taken is negative: they are considered insufficient, territory management can be improved and the waste and ecological transition strategies must be reinforced, in the opinion of surveyed residents.

However, on the other hand, the general perception of impact is good. It is observed that, in the opinion of the residents, Ericeira is an example for other WSR and since its recognition there has been a greater ecological awareness and quality of the beaches.

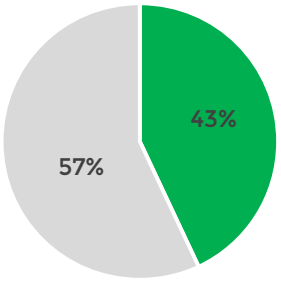
[There is a better system to treat the waste produced locally (sewers, effluents, ...)]



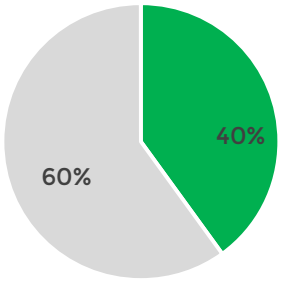
[It will not be hard for Ericeira to achieve the carbon neutrality required by the European Union by 2050]



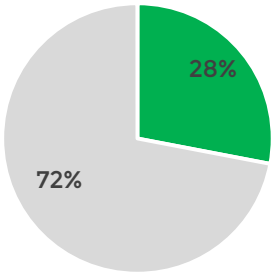
[The natural landscape has been particularly protected]



[Local biodiversity is more protected and respected]



[Beaches have less load (a lower usage/space ratio, i.e. less usage and more space)]



Strongly agree + Agree Strongly disagree + Disagree

Co-funded by the Erasmus+ Program of the European Union

SUSTAINABLE PLANNING

The Save the Waves Coalition (SWC) aims to safeguard unique waves, through the creation of a World Network of Surfing Reserves, based on the standards established by the UNESCO World Heritage program and the Australian Surfing Reserves. It establishes partnerships with surfers and local environmentalists, in order to identify and preserve high quality surfing areas, through sustainable management (Castro, 2011).

However, the selection and recognition of a Surfing Reserve is not contemplated in the Portuguese legislation. This situation hampers other SWC goals, namely the intention to ensure the protection of surrounding environmental characteristics (SWC, 2015).

Waste management plan:

In 2015 Mafra created the Action Plan (PAPERSU) to fulfill the PERSU 2014-2020 (for Urban Solid Waste)

Wave Regulation Plan in the Coastline Plan:

The World Surfing Reserve was considered in the Coastline Program: Alcobaça-Cabo Espichel (2019).

In 2020, Mafra Municipality signed a commitment with Biosphere Responsible Tourism with the goal of being certified as a "Sustainable Tourist Destination". After a set of associated processes, certification was obtained in early 2022.

Co-funded by the Erasmus+ Program of the European Union

WATER QUALITY

Mafra Municipality coastline is exposed to human pressure consequences, such as: discharge of treated water from two WWTPs (Wastewater Treatment Plant), RIBEIRA DE ILHAS and FOZ DO LIZANDRO, and several sewage discharges.

The submarine outfall of the Wastewater Treatment Plant of Ribeira de Ilhas/Ericeira, two discharges in São Lourenço and a sewage disposal in Ribamar are located in the Ericeira WSR.

The assessment of the quality of the water discharged by the WWTPs in the coastline is a responsibility of the entity that operates it, namely Atlantic Tagus Water, Waters from Portugal group (EPAL).

The obtained results demonstrate assurance in the water quality at an absolute and also relative level (compared to the national average).

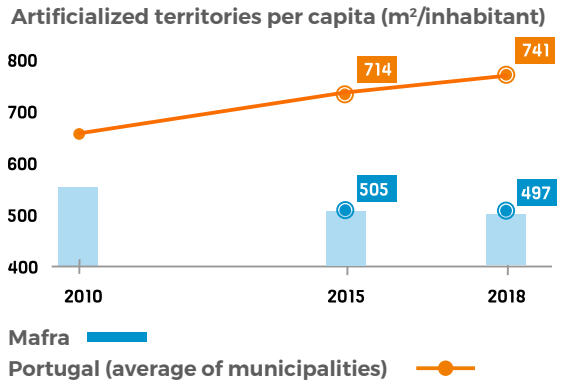
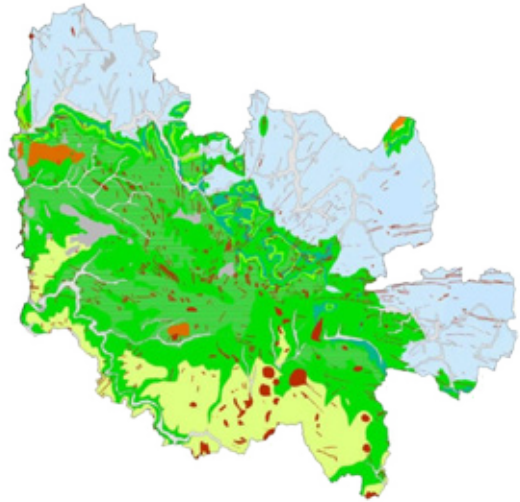
Zone along the maritime coastline	4498,64	-



Source: Local SDGs – Municipality Platform for Sustainable Development Goals

LEGEND:

- Alluvium and/or landfills.
- Sand, sandstones and gravel.
- Consolidated dunes/Marine terrace deposits.
- Upper Cretaceous Lisbon volcanic complex.
- Upper Cretaceous limestones, marls, sandstoned and dolomites.
- Lower Cretaceous mudstones, sandstones, dolomites, claystones and conglomerates.
- Lower Cretaceous limestones, marls, sandstones and dolomites.
- Lower Cretaceous sandstones.
- Upper Jurassic limestones, marls and sandstones.
- Plutonic eruptive rocks.
- Eruptive rocks (lodes/masses).



The proportion of artificial land surface per Mafra inhabitant has decreased. This fact may indicate a controlled urban planning growth, although it is necessary to deepen this analysis regarding smaller areas, mainly in the coastline areas of Mafra's municipality.
Specifically in Ericeira case, it is acknowleged that the population increase of the last two decades is causing an increase in urbanized land. However, due to the population growth, the m2/inhabitant ratio can remain or even decrease.

Co-funded by the Erasmus+ Program of the European Union

URBAN GROWTH

As mentioned before, the ratio of urbanized land per capita shows that Mafra did not undergo a greater expansion comparing to the rest of Portugal. However, it is possible that a strong population growth has led to a high level of urbanization.

Mafra has experienced significant urban growth in the last two decades. The number of accommodations increased by more than 26%, which represents a growth considerably higher than that experienced in the country as a whole and in the Lisbon Metropolitan Area.

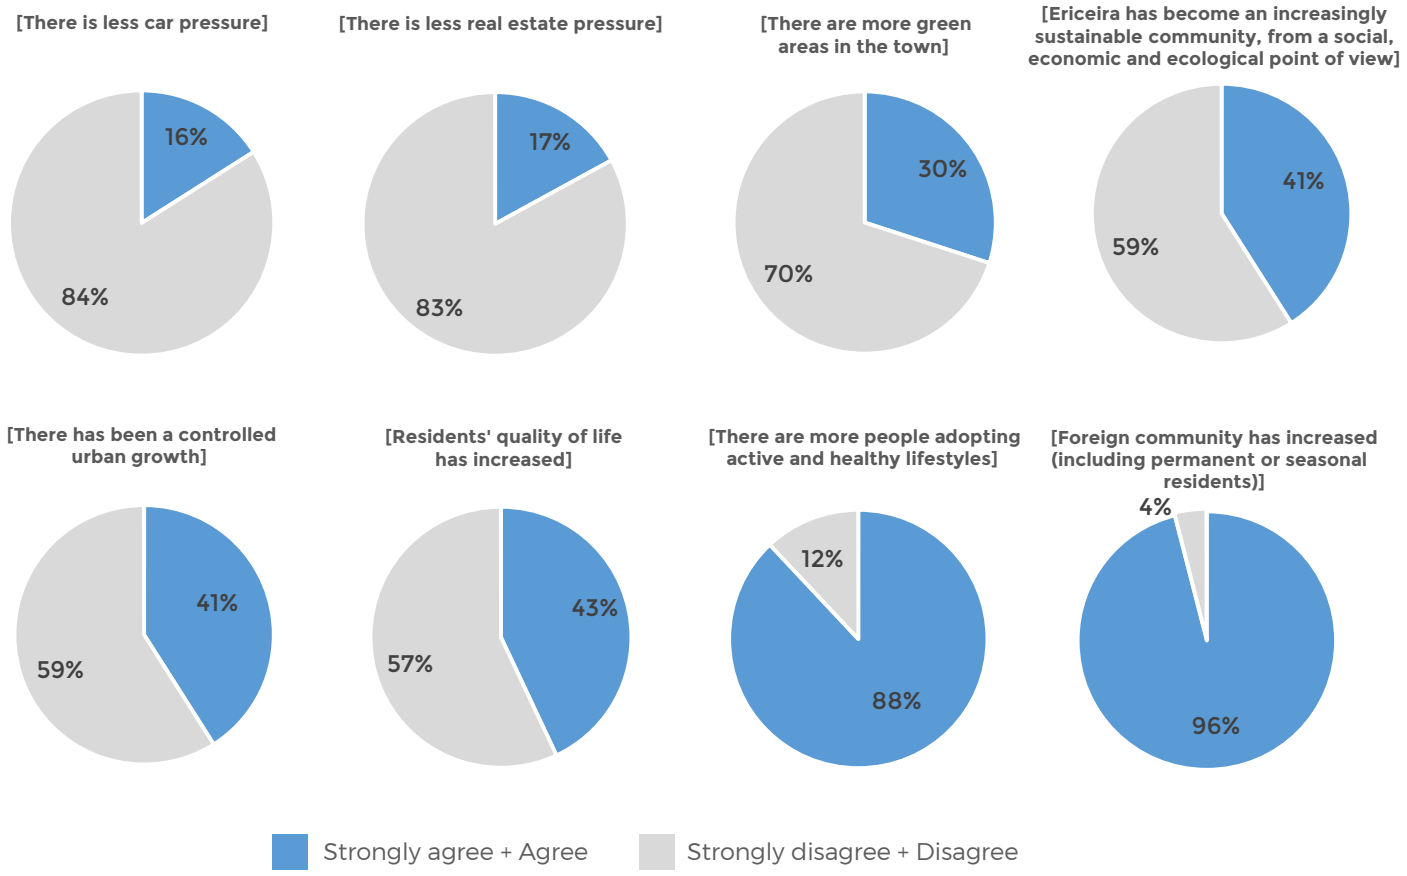
RESIDENTS' PERCEPTION ABOUT THE TERRITORIAL IMPACT OF THE ERICEIRA WSR

Most residents consider that there is a **substantial increase in the number of foreign residents.**

They also consider that urban and social changes have made it easier to a **greater number of people, to adopt active and healthy lifestyles.**

There is distrust regarding other urban and **territorial impacts linked with the development that took place after the recognition of Ericeira as a WSR.**

Some elements identified by residents, such as: **real estate pressure, increased traffic and urban growth, were not accompanied by an increase in the number of parks and green spaces. This data suggests that Ericeira is not oriented towards sustainable development and that WSR has not had a positive impact on the residents quality of life.**



Source: Survey applied to residents in Ericeira (2021)

Co-funded by the Erasmus+ Program of the European Union

BIODIVERSITY

"It was concluded that there was no seasonality in the practice of activities, with the exception made to bathers. In the practice of recreational fishing activity, the main catch is the catch of seafood for own consumption. Mussels and octopus are the most caught and in quantities that do not comply with the regulating legislation. Most of the enquirees mentioned that size and quantity of fishing significantly decreased, and the number of people to start fishing increased (...)."

Sportsmen exert pressure on habitat 1170 with the random trampling to reach the sea, especially at low tide, and stands out in the summer season (more intense, but moderate in the rest of the year).

TRANSPORT

Based on the analysis of different regions where surfing is a reference practice, Butt (2015) identifies that the carbon footprint of a regular surfer is greater than that of the average citizen. Through the survey carried out to tourists, we sought to understand the impact of travelling to Ericeira by those who visit it for the purpose of surfing.

	km ROUND-TRIP PER PERSON	kg CO_2 PER PERSON	TOTAL
29	4688 km	563 kg CO_2	16314 kg CO_2
2	4785 km	239 kg CO_2	479 kg CO_2
14	2232 km	128 kg CO_2	1787 kg CO_2

Source: Ericeira's tourists survey (2021)

From the 117 tourists questioned, 45 practiced surfing (38,5%). From these 45 surfers, 29 travelled by plane, 2 by bus and 14 by car.

The tourists were enquired about the city they came from, in order to calculate the distance traveled in the round trips of the 45 participant surfers.

An emissions calculator was used in order to calculate the CO2 emissions of all the kilometers traveled by tourists who came to Ericeira to surf.
calculator used: CalCarbono (Government of Aragon, Spain).

Travel Emissions
Starting location > Ericeira > starting location of the 45 surfers

18579 kg CO2

Economical Impact

Based on the bibliographic review of the different studies on the impact of surfing and sports tourism in the territory and on the analysis of the secondary data available, the following potential benefits and economic costs were defined:

POTENTIAL ECONOMIC BENEFITS

- DIVERSIFICATION AND MODERNIZATION OF THE LOCAL ECONOMY
- CREATION OF COMPANIES AND PRODUCTS RELATED TO SURFING
- EXPANSION OF PARALLEL OR COMPLEMENTARY SERVICES COMPANIES TRAINING AND EMPOWERMENT IN BUSINESS MATTERS
- PROMOTING COOPERATION THROUGH THE ESTABLISHMENT OF COMMON GOALS BETWEEN CITIZENS-COMPANIES-PUBLIC ADMINISTRATION
- CREATION OF AN INNOVATION ECOSYSTEM

POTENTIAL ECONOMICAL COSTS

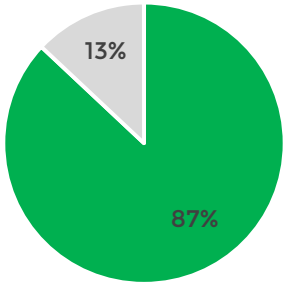
- SUCCESS (IN NUMBER OF TOURISTS) POTENTIATES SATURATION AND REDUCES ATTRACTIVENESS
- EXTERNAL INVESTMENT THAT DOES NOT BENEFIT THE TERRITORY AND LOCAL WORKERS, TRANSFERRING THE GAINS TO OUTSIDE THE MUNICIPALITY/COUNTRY
- UNEVEN DISTRIBUTION OF BENEFITS AMONG THE POPULATION
- RISK OF DEVELOPMENT OF SEASONAL TOURISM WITHOUT THE SAF GUARD OF CULTURAL AND ENVIRONMENTAL TOURISM

The data obtained and analyzed sought to confirm the existence of these potential impacts through the different indicators presented next.

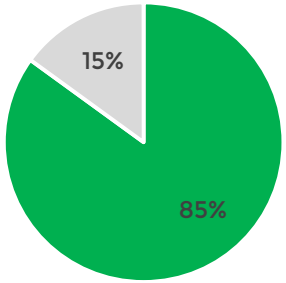
Co-funded by the Erasmus+ Program of the European Union

RESIDENTS' PERCEPTION ABOUT THE ECONOMIC IMPACT OF ERICEIRA'S WSR

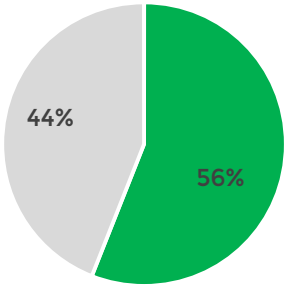
[There are more companies and greater economic activity]



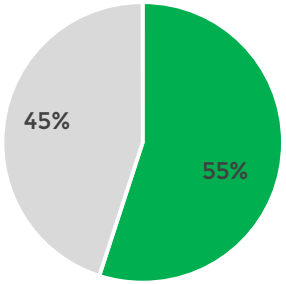
[There has been an economic growth trend]



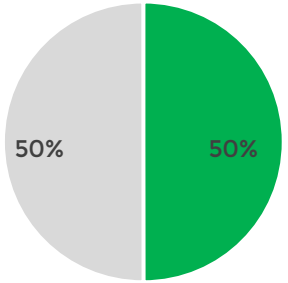
[Local commerce has thrived]



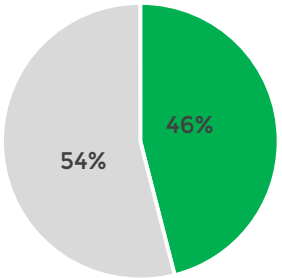
[There are more incentives for local entrepreneurs]



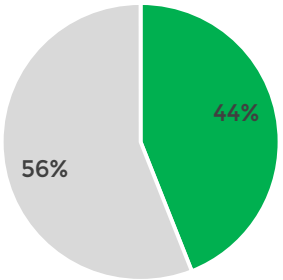
[Ericeira has become an example of circular and sustainable economy]



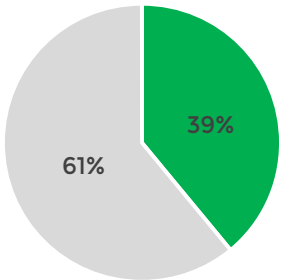
[Economic development has provided better living conditions for residents]



[There are more and better jobs for residents



[Local residents have greater purchasing power]



Strongly agree + Agree Strongly disagree + Disagree

Most respondents agree that the WSR award has brought economic growth to Mafra, having increased the number of companies, businesses and incentives for entrepreneurship.

However, they do not agree with the development model that surfing has been promoting.

Half the people believe that it is not a circular economy model and more than half believe that this economic growth has not improved employment conditions, purchasing power or the living conditions of residents.

The risk of transferring capital gains to outside the municipality, has been signalized.

Source: Survey applied to residents in Ericeira (2021)

Co-funded by the Erasmus+ Program of the European Union

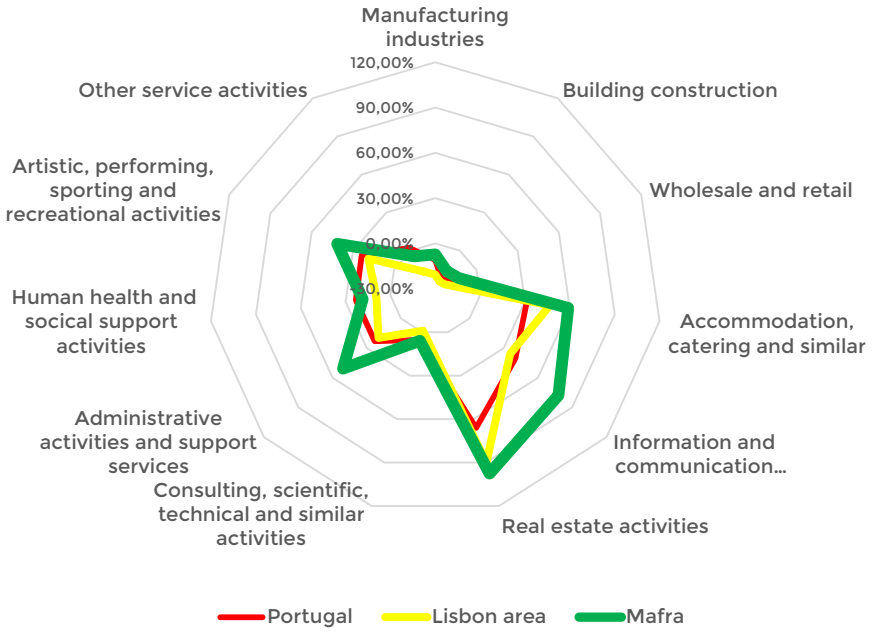
ECONOMIC GROWTH

As it was not possible to access specific data regarding companies based in Ericeira and which are directly connected to the activity and phenomenon of surfing, the productive structure of the municipality of Mafra was then observed, focusing on the number of non-financial companies by economic sector. The analysis carried out is restricted to the sectors that were considered to be the most representative, not having been considered, for example, the agricultural and electrical sectors.

In Mafra's Municipality, the last decade has seen a significant growth in the number of companies in sectors related to tourism and services, namely:

- Accommodation
- Real estate activities
- Administrative and support services activities
- Information and communication activities
- **ARTS, PERFORMANCE, SPORTS AND RECREATIONAL ACTIVITIES.**

Non-financial companies: total and by economic activity sector

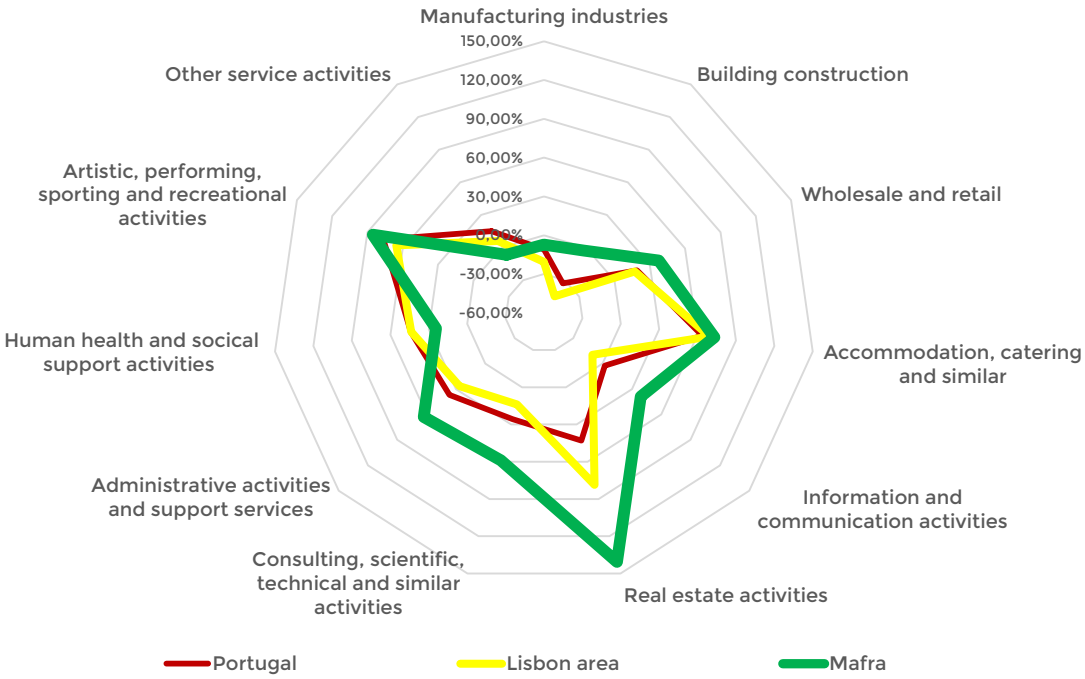


Source: PORDATA – Contemporary Portugal database

Co-funded by the Erasmus+ Program of the European Union

The growth in revenue from real estate activities in Mafra is considerable. This is a much higher revenue than the average for Portugal and the Lisbon Metropolitan Area. However, its increase is greater than the number of companies.

Revenue of non-financial corporations: total and by economic activity sector.



Source: PORDATA – Contemporary Portugal database

Co-funded by the Erasmus+ Program of the European Union

PURCHASING POWER

It is possible to observe that the purchasing power per capita in Mafra's Municipality has suffered a decline over time, with values and dynamics similar to the national average. There is a slight approximation to the values of the Lisbon Metropolitan Area, boosted by a sharp drop of purchasing power in the average of metropolitan municipalities (10% in a decade).
However, and despite this, they remain considerably higher than the average for Mafra's Municipality (with a difference close to 25%). In the survey addressed to Ericeira residents of and as already mentioned, it also shows that the WSR of Ericeira did not bring greater purchasing power to locals, so a transfer of the generated capital gains to outside the Municipality is expected. On the other hand, it is also necessary to take into account that the values perceived refer to Mafra's Municipality as a whole, so internally there may be different dynamics, namely in the parish of Ericeira or those located on the coast.

THE GROWTH IN THE NUMBER OF COMPANIES AND THEIR REVENUE IS NOT REFLECTED IN THE INCREASE OF THE PURCHASING POWER OF THE POPULATION OF MAFRA.

IT IS POSSIBLE THAT A TRANSFER OF CAPITAL TO OUTSIDE MAFRA'S MUNICIPALITY IS OCURRING.

	2011	2013	2015	2019
Portugal	100,0%	100,0%	100,0%	100,0%
Lisbon area	131,0%	125,1%	124,7%	121,8%
Mafra	101,6%	96,9%	96,4%	98,3%

Source: PORDATA – Contemporary Portugal database

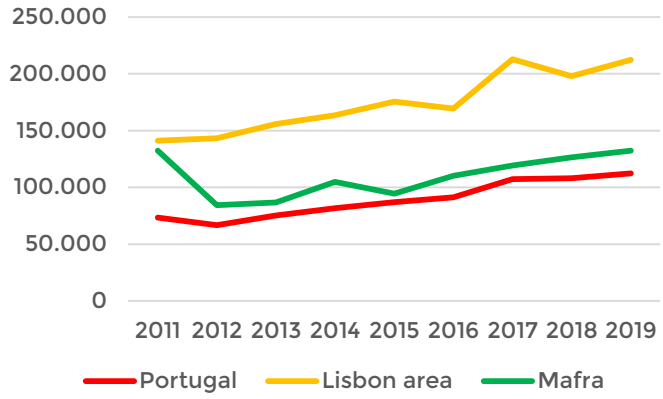
REAL ESTATE SECTOR

Tourist sites are subject to the risk of real estate pressure. Housing management for tourist accommodation can generate a shortage of supply, causing prices to rise.

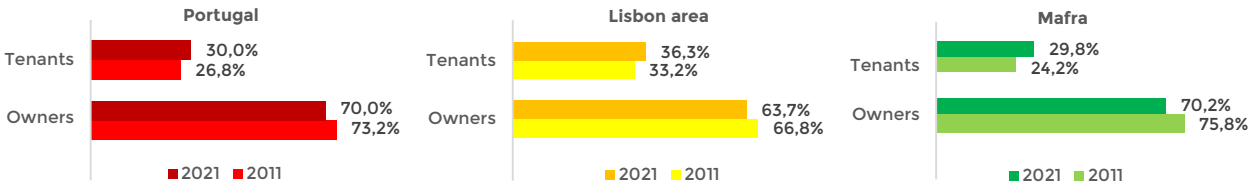
THE DATA ON THE AVERAGE VALUE OF THE PRICES OF REAL ESTATE TRANSACTIONS DOES NOT DEMONSTRATE A HIGHER PRESSURE IN THE MUNICIPALITY OF MAFRA WHEN COMPARED WITH THE REST OF THE COUNTRY.

Average value of traded buildings

	2011	2012	2013	2014	2015	2016	2017	2018	2019
Portugal	73.379	66.809	75.249	81.590	8.7111	91.294	107.381	108.016	112.470
Lisbon area	141.060	143.245	155.789	163.587	175.533	169.477	212.927	198.029	212.441
Mafra	132.253	84.472	86.809	104.924	94.421	110.191	119.299	126.535	132.434



Property owners – Tenants(%)



THE PROPORTION BETWEEN OWNERS AND TENANTS DOES NOT SHOW DIFFERENCES BETWEEN THE MUNICIPALITY OF MAFRA AND THE REST OF THE COUNTRY.

However, as previously noted, the answers from the surveys addressed to residents of the Ericeira World Surfing Reserve regarding real estate pressure, show the increase in housing prices as one of the main concerns, which in its turn indicates a great asymmetry in housing prices, between the interior and coastline of the municipality of Mafra.

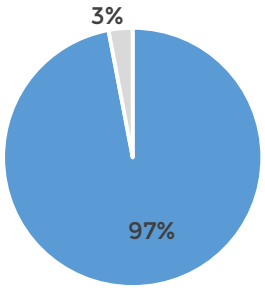
RESIDENTS' PERCEPTION ABOUT THE IMPACT OF THE TOURISM SECTOR IN THE ERICEIRA WSR

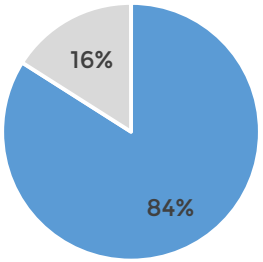
Ericeira's residents' perception regarding economical development and Tourism sector is similar and they agree that both have grown significantly in the last decade.

Nevertheless, residents show discontent regarding the tourism model implemented.

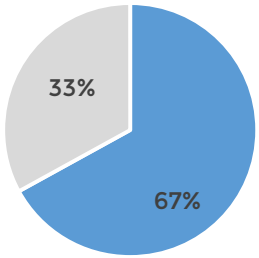
[Tourism has increased]



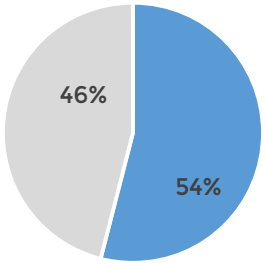
[There is greater diversity in touristic supply]



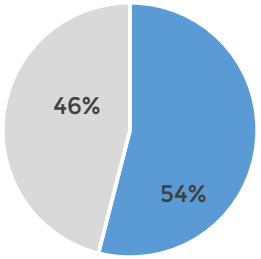
[Ericeira has established itself as a sustainable destination]



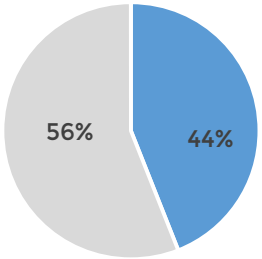
[The local touristic offer is self promoting from a community engagement, sustainability and respect for nature perspective]



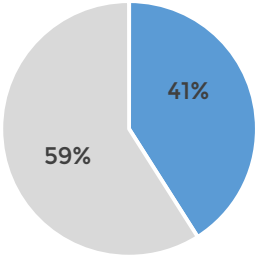
[The Tourism practices taking place are reinforcing Ericeira's identity as a sustainable destination]



[The Tourism related practices taking place are improving the local surfing quality and the World Surfing Reserve area]



[An effort to promote a qualified tourism experience versus a mass tourism experience has been made]



[Ericeira's Tourism related practices have contributed to a more sustainable, respectful and engaged community]

Image Impact

Based on the bibliographic review of the different works on the impact of surfing and sports tourism in the territory and on the analysis of the secondary data available, the following potential impacts on the image and identity of Ericeira were defined:

POTENTIAL IMPACTS ON ERICEIRA'S IMAGE AND IDENTITY

- VALUING THE IMAGE TOURISTS AND VISITORS HAVE OF ERICEIRA
- IDENTITY FELT BY LOCALS
- PRESENCE AND RECOGNITION ON SOCIAL NETWORKS
- PRESENCE AND RECOGNITION IN THE MEDIA

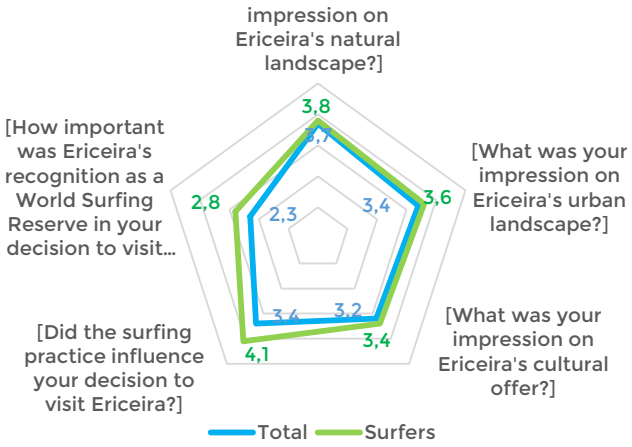
The data obtained and analyzed sought to confirm the existence of these potential impacts through the different indicators presented next.

Co-funded by the Erasmus+ Program of the European Union

ERICEIRA'S MAIN FEATURES

The most valued feature by tourists, surfers and non surfers is Ericeira's natural landscape

Valuing Ericeira's features - Before Arriving



Valuing Ericeira's features - After Arriving

What was your impression on Ericeira's..?	Everyone	Surfers
Natural landscape	4,2	4,2
Urban landscape	3,7	3,7

QUESTIONS ABOUT ERICEIRA'S IDENTITY

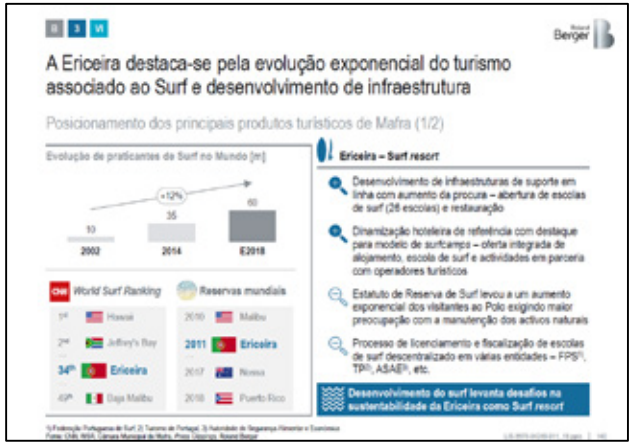
“THE GUARDIAN”: SURFING IS PART OF ERICEIRA'S IDENTITY

On March 25, 2017, the sculpture of "O GUARDIÃO" was inaugurated, symbol of the Ericeira WSR’s identity and which highlights the preservation of the environment, honoring the various generations of surfers. It is the work of the sculptor José Queiroz.

“This image has proven to be an icon for the area that, through merchandising, reinforced the image and identity of EWSR. During local festivities,and at the Championship, t-shirts with the EWSR symbol and miniatures with the EWSR naming were sold. An example of its growing relevance is the engraving of the “Guardian” on the World Championship trophy, event that was held in September 2018 in Ericeira” (Carapinha, 2018).

ERICEIRA IS CONSIDERED A TOURIST POLE IN THE STRATEGIC TOURISM PLAN FOR THE LISBON REGION 2020-2024: PETRL2020

Surfing is fundamental in the recognition of Ericeira as one of the 12 tourist hubs (and one of the 5 consolidated hubs) in the **STRATEGIC TOURISM PLAN FOR THE LISBON REGION 2020-2024.**



Co-funded by the Erasmus+ Program of the European Union

ERICEIRA'S PERSONALITY

Results related to the "Personality of Ericeira" (research carried out with residents and tourists):

- **EXTROVERT**
- **IN VOGUE**
- **SINCERE**
- **COOL**
- **CONFIDENT**
- **WELCOMING**
- **PEACEFUL**
- **PRAGMATIC**
- **SANE/HEALTHY/ROBUST**
- **ATTRACTIVE**

Source: Martins (2021)

These personality traits were later on confronted with the institutional vision of Mafra's Municipality.

The features identified by the Municipality of Mafra (CMM) are convergent with residents and tourists opininions, but different from the results obtained. In fact, only 7.9% of the features/characteristics identified by local stakeholders relate to the "surfing" theme (includes surfing, World Surfing Reserve, waves and water sports), which could mean that the heritage and culture of local surfing are not relevant factors for the sense and recognition of Ericeira as a place and destination.

This fact can be considered as problematic if Mafra's Municipality perspective and Ericeira's image are developed strictly focusing on surfing and nature tourism, leaving no space for a DIFFERENT alignment with other resources and other local agents, namely tourism services providers.

Co-funded by the Erasmus+ Program of the European Union

ATTRACTIVE FOR DIGITAL NOMADS

The improvement of telecommunications around the world, combined with the growing possibility of working remotely and the necessity of social distancing imposed during the COVID-19 pandemic, has boosted the increase in the number of people who choose to move to more attractive places to live and to where they can work from remotely.

There are several websites with listings of recommended places to live for the so-called digital nomads. Generally these places have a pleasant climate, high quality of life and good telecommunications.

One of the most recognized and visited website, by digital nomads, is the Nomadlist.

Nomadlist offers a ranking of the 229 places in the world most searched for by digital nomads. Ericeira ranks 21st on this list.

Conclusions

SOCIAL IMPACT

ERICEIRA'S POPULATION HAS INCREASED OVER 20% since becoming WSR, although this increase is unlikely to be directly linked to that fact. The migration of the population to coastal areas has been common throughout the Portuguese territory. In fact, the population has been increasing annually due to births and immigration.

The possibility of PRACTICING SURFING IS NOT AMONG THE MAIN FACTORS FOR LIVING IN ERICEIRA. The main thing is to live close to nature and the sea.

THE POPULATION OF MAFRA IS YOUNGER than the national average. However, it is also worthy of mention the growth in the aging rate.

THE GROWTH OF SURFING IN ERICEIRA has been meaningful especially after Ericeira was granted the accolade of World Surfing Reserve. This fact is widely known by the resident population, which notices a greater number of surfers on Ericeira's beaches.

Several social inclusion initiatives related to the surfing practice were also carried out in Ericeira.

MOST interviewed RESIDENTS have the conviction THAT THE SURFING COMMUNITY DOES NOT ADOPT BEHAVIORS OF RESPECT AND PROTECTION towards BEACHES, as a natural patrimony, AND towards OTHER Beach users.

Nevertheless, and despite the raise in the number of tourists, there is no increase in the number of accidents, offenses or complaints related to motorhomes, which in its turn indicates stability regarding local safety levels.

At last, LITTLE LOCAL COMMUNITY ENGAGEMENT is verified and many are unfamiliar with the meaning of having a WSR in Ericeira, among both the resident population and tourists.

Co-funded by the Erasmus+ Program of the European Union

ECONOMIC IMPACT

THE ECONOMIC GROWTH of the municipality of Mafra in general and of Ericeira in particular has been considerable, especially in the services sector. The sector that grew the most was the REAL ESTATE SECTOR.

UNEMPLOYMENT levels in Mafra are LOWER than the national average but follow the evolution dynamics of the country.

However, the resident population is aware that this economic growth is not reflected in the employment conditions, namely better job conditions or a better quality of life.

Statistics show that, in fact, PURCHASING POWER PER CAPITA STAGNATED, very similarly (slightly lower) to the national average and to the Lisbon Metropolitan Area.

There is great expansion in the hotel business sector, in tour activities companies and in surfing schools.

Analysing the data obtained regarding economic and tourist growth and considering the stagnation of the purchasing power, it is assumed that THE REVENUE GENERATED IN ERICEIRA IS NOT STAYING IN THE ERICEIRA AREA. This happens because of the HIGH NUMBER OF COMPANIES THAT operate in Ericeira, but HAVE THEIR HEADQUARTERS OUTSIDE ERICEIRA AND THE MUNICIPALITY OF MAFRA.

It should be noted that, although there are no major differences between the Municipality of Mafra, the Lisbon Metropolitan Area and the country in different economical aspects,

THIS SHOULD NOT BE REPRESENTATIVE OF THE ERICEIRA'S REAL SITUATION IN THIS MATTER.

Indeed, the fact that the official data referring to Ericeira appears only integrated in the municipal average is not aligned with the opinions expressed by residents in the survey sent to them, with the particular characteristics of Ericeira from the tourism point of view or with its particularities within Mafra's Municipality.

THEREFORE THE NEED TO DELIMINATE THE DATA THAT IS SPECIFICALLY RELATED TO ERICEIRA IS EVIDENT.

Co-funded by the Erasmus+ Program of the European Union

ENVIRONMENTAL IMPACT

LACK OF SPECIFIC ENVIRONMENTAL STRATEGIES AND REGULATIONS FOR WSR (preservation, conservation, mobility, waste treatment strategies...). Different academic studies defend the existence of a legal protected zone associated with the recognition of Ericeira's WSR.

Surfers, when asked about the creation of a protected area as a management measure, with the aim of reducing the frequency of surfing schools on Ribeira d'Ilhas beach, show great acceptance and support for the initiative, with around 62% in favor and 27% against (Pedro, 2017).

As far as URBAN DEVELOPMENT is concerned, there is a discontentment with the urban planning executed so far. The actions taken in this area are considered INSUFFICIENT.

However, the APPRAISAL OF THE ENVIRONMENTAL SITUATION in Ericeira over the last decade is POSITIVE, raising inconsistency issues regarding the interviewers answers.

The MAIN ENVIRONMENTAL IMPACTS identified are:

- urban pressure causes WATERPROOFING OF THE SOIL (even though the urban growth was higher during the previous decade).

- IMPACT ON BIODIVERSITY, in very localized areas of access to the water/sea.

- CO2 Emissions arising from TRANSPORTATION, due to travelling distance from the original locations to Ericeira. This is an issue that is beyond local authorities' control.

Co-funded by the Erasmus+ Program of the European Union

IMPACT ON THE IMAGE

Ericeira's most valued ATTRIBUTES are related to its NATURAL ENVIRONMENT AND LANDSCAPE.

THE POSSIBILITY OF PRACTICING SURF IS THE MOST VALUED BY SURFER TOURISTS, but also by tourists who do not practice the sport.

The fact that Ericeira is a WSR has low impact on the visitors/tourists side. A high number of the enquired visitors, including surfers, are NOT AWARE THAT ERICEIRA IS A WSR.

THE EVALUATION OF BEACHES, GENERAL SERVICES AND SERVICES ASSOCIATED WITH SURFING IS VERY POSITIVE.

ERICEIRA HAS SOLID INTERNATIONAL REPUTATION AS A GOOD LOCATION TO SETTLE.

Co-funded by the Erasmus+ Program of the European Union

LIMITATIONS OF THE STUDY

THE LACK OF SPECIFIC DATA ABOUT ERICEIRA resulted, in most cases, in the need to collect data related to the entire municipality of Mafra. This need implies and generates an accentuated misrepresentation regarding the assessment of impact at a local level. Mafra is a large municipality and has 11 parishes. The impact of the WSR is especially evident in Ericeira (and in the other 3 coastal parishes), so the assessment of this impact BECOME scattered by integrating data that is also related to the other 10 parishes.

FOR FUTURE ANALYSIS, AND IN ORDER TO ENSURE THE EFFECTIVE ADJUSTMENT OF THE DATA TO THE OBSERVED REALITY, IT IS NECESSARY THAT THE COMPILATION OF DATA IS RESTRICTED SPECIFICALLY TO DATA ABOUT ERICEIRA.

In addition, it is important to consider that THE OBSERVED EFFECTS that are directly or indirectly related to the phenomenon and impacts of surfing in Ericeira CANNOT BE EXCLUSIVELY CORRELATED with the consecration of the World Surfing Reserve, because, as mentioned in the study, an important share of tourists are even unaware of the existence of the World Surfing Reserves. Indeed, SURFING HAS BEEN ASSUMED AS AN ESSENTIAL FACTOR IN NATIONAL STRATEGIES IN DIFFERENT SECTORS, being specifically identified, in addition to the aforementioned Strategic Tourism Plan for the Lisbon Region 2020-2024 and the Alcobaça Coastal Program – Cabo Espichel, in National Strategy for the Sea 2021-2030, in the Tourism Strategy 2027, in the +Sustainable Tourism Plan 20-23 and in the Framework of Principles to Observe in Coastal Management.

Co-funded by the Erasmus+ Program of the European Union

LIMITATIONS OF THE STUDY

The results of the surveys addressed to residents and tourists must also be PRUDENTLY interpreted. The surveys were carried out in 2021, in the midst of an unstable situation due to the COVID-19 pandemic. THE NUMBER OF VISITORS that Ericeira welcomed was clearly LESS THAN USUAL. Possibly, its PROFILE would also be different from other pre-pandemic years. The CONSUMPTION GUIDELINES have been clearly modified by the restrictions and by the decisions of the people who visited Ericeira.

This study also made evident the need for an ASSESSMENT TOOL COMMON TO ALL WSR AND ALL SURF CITIES as a way of comparing and delimiting the different indicators considered. This case study presents aspects of interest that justify an integrated analysis and respective design of a common assessment and monitoring tool for WSR and Surf Cities.

This INTERVENTION makes it possible to obtain approximate knowledge of the impact of WSR in the different consecrated places, thus promoting the DESIRED SOCIAL AND ECONOMIC DEVELOPMENT with the LOWEST ENVIRONMENTAL IMPACT possible.

ATTACHMENT 1 - Survey applied to residents in Ericeira (original in Portuguese)

PERCEPTION OF ERICEIRA'S RESIDENTS ABOUT THE 10 YEARS OF THE WORLD SURFING RESERVE

Analysis of Territorial, Economical, Touristic, Sport and Sustainability impacts.

This survey is part of a study carried out by Ericeira Surf Clube in the scope of the "EriceiraWSR+10" project, co-funded by the European Commission through the Erasmus+ Sport programme, and dedicated to the relationship between surfing and sustainability as a motto for the celebration of the 10th anniversary of the World Surfing Reserve recognition to Ericeira.

The objective of this study is to analyse the impact that the World Surfing Reserve had in Ericeira during its 10 years of existence, focusing in the territorial, economic, touristic, sporting and sustainability local dimensions.

The knowledge of these impacts will make possible to reinforce and/or to promote the reorientation of local policies related to the World Surfing Reserve. Your answer is essential for the knowledge about the perspectives of the resident population regarding the effects caused by the attribution of the World Surfing Reserve status to Ericeira.

Residents in Ericeira area should be understood as all those people who live in areas close to the coast between São Julião beach and Calada beach (and, thus, integrated in the Parishes of Carvoeira, Ericeira, Santo Isidoro and Encarnação) or who visit Ericeira very often.

The survey is voluntary and anonymous and takes about 15 minutes to complete. It must be completed by persons with more than 18 years old.
You may leave the survey at any time prior to your final submission.

We are very grateful for your cooperation.

The Board President of the Ericeira Surf Clube
Miguel Barata de Almeida.

Co-funded by the Erasmus+ Program of the European Union

All research activities will be conducted in compliance with the recommendations of the World Medical Association declaration of Helsinki, revised in Fortaleza.

All data collection and treatment will be conducted according to the Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016.
